Narrative Report on the Results of the Student Survey for the MSc in Physiotherapy Program 2026

Strengths

The analysis of the survey results indicates that students have a positive perception of the quality of the MSc in Physiotherapy program. Students believe that the program enables them to acquire the necessary professional and academic knowledge and competencies, which contribute to their academic and professional development.

The program is perceived as being oriented toward evidence-based physiotherapy and provides multidisciplinary knowledge that supports the development of clinical and research competencies. Students positively evaluated the organization of the studies, their involvement in decision-making processes related to the organization of teaching, as well as the information provided regarding academic procedures and the preparation of the master's thesis.

Furthermore, the results show that the teaching methods are considered appropriate and interactive, reflecting the commitment of the academic staff to creating an active, collaborative, and student-centered learning environment. The duration of the program is considered appropriate for achieving the intended learning outcomes and developing professional competencies.

Areas for Improvement

Although the results are generally positive, students identified several areas requiring further improvement. These include improving access to information through the official Faculty and University websites, enhancing infrastructure and equipment for teaching and practical exercises, as well as improving the spaces dedicated to teaching and learning activities.

Another aspect requiring attention is the expansion of access to contemporary literature and international scientific databases in order to further support evidence-based practice and the development of students' research competencies.

Measures Undertaken and Actions for Improvement

The MSc in Physiotherapy program is committed to continuous quality improvement and continuously undertakes concrete measures to address the recommendations provided:

- Updating and enriching the information available on the official Faculty and study program websites;

- Gradual improvement of infrastructure and equipment for teaching and practical training;
- Increasing access to scientific literature, electronic databases, and digital learning resources;
- Further integration of innovative methods and contemporary technologies into the teaching process;
- Continuing activities related to evidence-based practice and scientific research.

Conclusion

The survey results confirm that the MSc in Physiotherapy program provides a high-quality academic experience and contributes to the development of students' professional, clinical, and research competencies. At the same time, the program remains committed to the continuous improvement of quality by addressing students' recommendations and ensuring compliance with institutional, national, and international standards of higher education.
